Single Column Frame

A frame with one column accepts two arguments like below:

```
\SingleFrame{Frame Title}{Frame Content}
```

This green background is generated by

```
\gNode{Node Text}
```

Node text can accept any thing. You have multiple colors nodes.

```
\rNode{Red Node}
```

```
\gNode{Blue Node}
```

```
\wNode{Balck-White Node}
```

Double column frame could be inserted via command:

```
\DoubleFrame{Frame Title}{First Column Content}{Second Column Content}
```

Double Column Frame

1. Fig.(a) is gold.

► Fig.(b) is Kashmir.

Property	Normal SO	
E_{gap} (eV)	1.32	1.20
Δ_{SO} (eV)	—	0.34
a (Å)	5.6	5.6
c/a	2.54	2.54
V (Å ³)	12.67	12.67

(a)

(b)

Including Graphics

Graphics environment is based on mini page. You can include as many figures as you can.

`\Figures{List of graphics as Subfigures Here}`

For example, the two pictures on previous slide were added as:

```
\Figures{  
  \subfigure[]{\includegraphics[scale=0.36]{resources/Gold.PNG}}  
  \subfigure[]{\includegraphics[scale=0.1]{resources/home.png}}  
}
```

This Package is Flexible

You can use all defined L^AT_EX environments inside frames.

Progress Bar

The progress bar in footline shows slide number. You can see that title also changes color when slides progress.

Progress bar also shows stopwatch over a predefined presentation time by setting `\pgfmathsetmacro{\TotalTime}{Minutes}` in preamble of document. Time is shown only in Adobe Reader. The package `tdclock` from CTAN is used to fetch system time in document.

A wide-angle landscape photograph showing a range of green, forested mountains under a bright blue sky with scattered white clouds. The mountains recede into the distance, creating a sense of depth. The sky is filled with soft, fluffy clouds, particularly on the left and right sides.
